DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:

- claim 1: a comma should be added before and after "as control signals" in line 14;
- claim 2: "the value of sine 0 and cosine 0 " should be --values of sine 0 and cosine 0 --;
- claims 3 and 7: in line 3, ".78/45" should be -0.78/45—and ".21/45" should be -0.21/45
- claims 4 and 8: "the range" in line 2 should be "a range"

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

2. The following is a statement of reasons for the indication of allowable subject matter: claims 1-6 are allowable over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of the said prior art which teaches an apparatus comprising a signal processor for processing a first and second color difference signals (B-Y, R-Y) being associated with a color signal having an amplitude and a phase to produce a phase shift (0) of the color signal in response to a control

Art Unit: 2626

signal wherein the control signal is in response to a user command to change the hue of the color signal and the signal processor produces an amount of phase shift in response to linear approximations (equations 7, 8) of non-linear functions (equations 5, 6).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Tachibana (US Patent No. 6,515,714) discloses a hue adjustment circuit for adjustment of a color difference signal by addition, subtraction, and multiplication of hue correction components generated from a sub-carrier signal and a color difference signal (R-Y, B-Y).
- b. Desprez-le Goarant (US Patent No. 6,211,923) teaches a device which corrects the chrominance parameters by shifting the phase of two demodulation signals.
- c. Stenzel et al (US Patent No. 5,737,032) recites a system that, under operator control a controller varies the conversion coefficients at the input-side color space converter to provide controllable hue phase shifting.
